

Table 3

Market-Based Valuation Regression Results (Hypothesis 1)

Variable	Coefficient	Std. Error	z	P > z	95% CI Lower	95% CI Upper
Intercept	2.215	0.069	31.976	0.000	2.079	2.351
Sentiment (scaled)	-0.069	0.056	-1.225	0.221	-0.179	0.041
Log Assets (scaled)	-0.662	0.078	-8.479	0.000	-0.815	-0.509
Debt-to-Equity (scaled)	0.451	0.089	5.086	0.000	0.277	0.625
ROA (scaled)	-0.326	0.108	-3.020	0.003	-0.537	-0.114
Market Liquidity (scaled)	0.594	0.132	4.503	0.000	0.335	0.852

Note: This table presents the regression results for the market-based valuation model testing Hypothesis 1.
Dependent variable: Market-to-Book Value (MBV). $N = 396$. $R^2 = 0.303$, Adj. $R^2 = 0.295$.
Standard errors are heteroskedasticity-consistent (HC1). Bold coefficients indicate significance at $p < 0.05$.
All continuous variables are standardized (scaled) for comparison purposes.
95% CI = 95% confidence interval bounds.

Table 4

Information Uncertainty and Sentiment Interaction Effects (Hypothesis 2)

Variable	Coefficient	Std. Error	t	P > t	95% CI Lower	95% CI Upper
Intercept	0.905	1.044	0.867	0.388	-1.170	2.979
Industry Controls						
ind_IT_SW_TEL	0.632	1.043	0.606	0.546	-1.441	2.704
ind_MFG	1.194	1.137	1.051	0.296	-1.065	3.453
ind_BIO_PHARM	2.258	1.354	1.667	0.099	-0.434	4.950
ind_FIN_INV	-0.175	1.506	-0.116	0.908	-3.169	2.819
Main Effects and Interaction						
Sentiment (scaled)	-0.086	0.365	-0.237	0.813	-0.811	0.638
Information Uncertainty	1.944	0.585	3.321	0.001	0.780	3.107
Sentiment × Info. Uncertainty	0.919	0.517	1.777	0.079	-0.109	1.946
Control Variables						
Log News Count (scaled)	0.605	0.272	2.225	0.029	0.064	1.145
Log Assets (scaled)	-0.471	0.312	-1.509	0.135	-1.092	0.149
Leverage (scaled)	0.646	0.269	2.399	0.019	0.111	1.180

Note: This table presents the regression results testing the interaction effect between sentiment and information uncertainty (Hypothesis 2).
Dependent variable: Market-to-Book Value (MBV). $N = 332$. $R^2 = 0.256$, Adj. $R^2 = 0.256$.
Standard errors are robust. Bold coefficients indicate significance at $p < 0.05$.
Industry dummy variables are included with reference category omitted.
All continuous variables are standardized (scaled) for comparison purposes.
95% CI = 95% confidence interval bounds. The interaction term tests the moderating effect of information uncertainty on the sentiment-valuation relationship.
